

PRODUCT HIGHLIGHTS

Baldwin Series II Fuel Manager® Style Redesign

March 2010

What is Series II?

The Baldwin Filters “Series II” fuel filter/water separators are direct replacements for the competitions’ “FM10” or “Gen III” products. The current Baldwin Series II line consists of 9 fuel filter/water separators.

What is the Change?

This family of filters is changing from a metallic housing to a high-strength polymer housing. As with the prior design, the new design will include a removable drain to accommodate the use of the various bowls, sensors and other optional components that are available from the OE dealer.

New Design Features Include...

- Tough, durable engineered polymer housing
- Conductive, polymer material designed to dissipate static electricity build-up
- Raised keys eliminated for universal fit on multiple fuel bases
- Wave spring provides installation resistance for proper fit
- No leaks at several hundred thousand application pressure cycles

When Will I See The New Design?

The Series II part numbers will not change. The new style filters will be placed into stock as the old style filter stock is depleted.

Series II Filters Include: BF7904-D BF7951-D BF7954-D
BF7949-D BF7952-D BF7956-D
BF7950-D BF7953-D* BF7971-D

Information regarding the Baldwin Series II Fuel Filter/Water Separator Redesign is available on the web in PDF format. This information can be found by going www.baldwinfilter.com/producthighlights.html.
